

WidgetX Product Manual

1. Overview

WidgetX is a desktop scanning device designed for small office environments. This manual covers unpacking, initial setup, daily operation, and basic troubleshooting steps that most users can perform without contacting support.

2. Unpacking and Setup

- 1) Remove the device and power adapter from the packaging.
- 2) Connect the power adapter to the device and to a wall outlet.
- 3) Connect the included USB cable to a computer.
- 4) Power on the device using the button on the rear panel.
- 5) Install the WidgetX driver package from the included media or the vendor website.

The device will perform a short self-test on first power-up, indicated by a blinking green LED. Once the LED becomes solid, WidgetX is ready for use.

3. Daily Operation

To scan a document, place it face-down on the glass, aligned to the top-left corner guide, and press the Scan button. Scanned files are saved to the default output folder configured in the WidgetX companion application. Users can change the output format between PDF and JPEG in the application settings.

4. Troubleshooting

- If the LED blinks red, check that the USB cable is fully seated.
- If scans appear streaked, clean the glass with a lint-free cloth.
- If the device is not detected by the computer, reinstall the driver package and restart the computer.

For issues not resolved by the steps above, contact support with the device serial number found on the underside of the unit.
